Developing Statistical Thinking

Theory
My Thesis

• **Statistical Thinking** is different from popular conceptions of mathematical thinking
Your Goal

• **Identify** some issues demarcating statistical and mathematical thinking

• **Reflect** on ways in which your teaching might change
Necessary Skills

- Think
- **Manage** yourself
- **Relate** to others
- **Participate and contribute**
- **Use** language, symbols and texts
Equipment Needs

• Paper
• Pen
• Highlighters (Optional)
Relate to others

Each person will now tell the group four things:

- Your name (emphasise the pronunciation)
- Where you were born and where you currently live.
- Why you were interested in this workshop.
- Describe some ways in which learning statistics has been difficult for students.
What is Statistical Thinking?

Take a few minutes to think and write down your thoughts about what it means to think statistically.
01 What is Statistical Thinking?

Statistics is a method of inquiry (Moore, 1990)

Statistics is a “discipline concerned with the study of variability, with the study of uncertainty and with the study of decision-making in the face of uncertainty” (Lindsay et al, 2004, p. 388)

Note: Teachers read Excerpt 1 from handout here
What is Statistical Thinking?

1 Dimension of Statistical Thinking from Wild & Pfannkuch (1999)
What is Statistical Thinking?

4 Dimensions of Statistical Thinking from Wild & Pfannkuch (1999)
...We kind of follow the PPDAC kind of formula so it’s like a plan, purpose of plan, your data, analysis, conclusion – that’s what we use to write out our Stats reports.

(Excerpt from Student Interview)
“The situation is serious for elementary teachers who have little or no experience in this field, and often demonstrate little interest in mathematics although they have to teach it....”

(Gattuso & Ottaviani, 2011, p. 124)
“...The situation is not much better for secondary teachers. Their mathematical knowledge is more important but in some ways, particularly if mathematics is seen in a formalistic view, this may even hinder their grasp of statistics....”

(Gattuso & Ottaviani, 2011, p. 124)
“…Most trainee secondary teachers will follow a course in statistics but very few teacher training programmes include the didactic of statistics. In fact, mathematic educators often casually admit their lack of qualification in the subject.” (Gattuso & Ottaviani, 2011, p. 124)
Developing Statistical Thinking

Take five minutes to think and write down your thoughts about the following questions:

- What differentiates mathematics and statistics?
- What are some of the obstacles for teaching Stats?
- What are some of the obstacles for learning Stats?
- What are some ways that you have overcome these obstacles?
Developing Statistical Thinking
1. The role of context; in statistics context provides meaning whereas in mathematics context provides the opportunity for applications [and]

2. The centrality of random variability or variability in data in statistics as opposed to the deterministic nature of mathematics

(Burril & Biehler 2011, p. 59)
In nearly all countries, statistics is not a separate school subject but is taught by teachers of mathematics, and training for teaching statistics occurs, if at all, as a catch-up in the form of professional development for practicing teachers.

(Burril & Biehler 2011, p. 65)
02 Developing Statistical Thinking

1. Data
2. Variation*
3. Distribution
4. Representation
5. Association and modelling
6. Probability models
7. Sampling and Inference*  
(Burril & Biehler 2011, p. 59)

Note: Teachers read Excerpt 2 from handout here
Developing Statistical Thinking

1. Certainty vs. Uncertainty
2. Statistics is a social construct and finds its meaning in context

(Burril & Biehler 2011)
(Gattuso and Ottaviani 2011)

Note: Teachers read Excerpt 3 & 4 from handout here
02 Developing Statistical Thinking

So what needs to be challenged at this point?
Some Ideas for Class
Some Ideas for Class

Plot of Year 9 Female Heights and Armspans

Plot of Year 9 Female Heights and Armspans
02 Some Ideas for Class
Some Ideas for Class

Geogebra Investigation
03 Certainty and Uncertainty

Is it correct that in Mathematics we are certain? Is it correct that in Mathematics we have objective truths? Is it possible to view mathematics as a social construct just like statistics?

Note: Excerpt 5 extra reading for homework

Sfard, A. (2001). There is more to discourse than meets the ears: Looking at thinking as communicating to learn more about mathematical learning.(Author abstract). Educational Studies in Mathematics, 46(1), 13.
